

Day 2:

The Day 2 is a Setup that develops from an in-play stock that trended on day 1. We look for a Day 1 move of over 1 ATR that also closed in the top 20% of the day's range. The Day 2 works because big players need to enter large positions over multiple days so we can look for continuation of the Day 1 move.

Best types of trades for this setup:

- Pullbacks
- Trend Continuation
